DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being clearly anticpated by Buican et al., US no. 6,339,536 ("Buican").

- 1. Buican discloses a device (FIG. 6) for protecting against electrostatic discharge and electromagnetic influences on electronic components in a housing, comprising: an I/O shield (307) covering a housing aperture formed in the housing; an element extending through the I/O shield (606) into the housing; and a sealing layer (310) disposed to seal the housing aperture and to form an electrical contact with the edges of the housing aperture.
- 2. The device according to claim 1, wherein the element is an electrical terminal or an operating element (FIG. 6).
- 3. The device according to claim 1, wherein the housing has wall surfaces defining the housing aperture and the sealing layer forms the electrical contact (Col. 4, lines 49-52) with the wall surfaces of the housing aperture (FIG. 6).

Application/Control Number: 10/607,523

Art Unit: 3676

4. The device according to claim 1, wherein the housing has exterior wall surfaces, and the electrical contact with the sealing layer is formed at the exterior wall surfaces (FIG. 6).

- 5. The device according to claim 1, wherein the housing has interior wall surfaces, and the electrical contact with the sealing layer is formed at the interior wall surfaces (FIG. 6).
- 6. The device according to claim 1, wherein the sealing layer consists of electrically conductive material.
- 7. The device according to claim 1, wherein the sealing layer comprises readily malleable electrically conductive material.
- 8. The device according to claim 1, wherein the sealing layer is disposed between the housing and the I/O shield (FIG. 6).
- 9. The device according to claim 1, wherein the sealing layer has dimensions exceeding dimensions of the housing aperture (i.e. the top surface of 310 extends higher than 640).
- 10. The device according to claim 1, wherein the I/O shield has a U-shaped form (see

Application/Control Number: 10/607,523

Art Unit: 3676

curved bottom).

11. The device according to claim 1, wherein the I/O shield has a trough-shaped form

(see recess retaining 310).
